Brainstorm & Idea Prioritization

The brainstorming activities below translate the supplied project objectives into practical automation ideas for standard laptop procurement.

Step 1: Team Gathering, Collaboration and Select the Problem Statement

Selected problem statement
Standard laptop requests can experience configuration delays because task creation and assignment are not fully automated. The selected focus is to automatically create and route the configuration task after the service request is approved.

Step 2: Brainstorm, Idea Listing and Grouping

Idea	Description	Group
1. Automatic catalog task creation	Create a Catalog Task automatically when the approved service catalog request reaches the configured Flow.	Automation
2. Automatic Hardware assignment	Set the Assignment Group to Hardware so the configuration task reaches the responsible team without manual routing.	Task allocation
3. Standard configuration description	Populate a consistent short description and description: “Laptop need to be Configured”.	Standardization
4. Approval-based execution	Use the approved request state as part of the task creation logic so configuration work follows approval.	Control
5. Flow-based catalog item integration	Attach the Standard Laptop Task flow to the Standard Laptop catalog item through Process Engine.	Integration

Step 3: Idea Prioritization

Priority	Idea	Reason for priority
High	Automatic catalog task creation	Directly addresses the main manual step and supports timely configuration.
High	Automatic Hardware assignment	Ensures the task is routed to the team responsible for configuration.
High	Approval-based execution	Keeps configuration task generation aligned with the approved request.
Medium	Standard configuration description	Improves consistency and makes the task purpose immediately clear.
Medium	Flow-based catalog item integration	Connects the automation to the Standard Laptop catalog item and supports repeatable execution.

Expected result

The selected ideas collectively support a seamless workflow in which an approved Standard Laptop request generates a configuration task, assigns it to Hardware, and reduces manual intervention in IT procurement.
