Project Design Phase

Solution Architecture

Date	29 September 2026
Team ID	SWTID-2026-3672
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Solution Architecture:

The proposed solution uses ServiceNow Flow Designer to bridge the gap between the Standard Laptop procurement request and the IT fulfillment process. The architecture automates request handling, catalog task creation, assignment, and tracking within the ServiceNow platform.

Architecture Components

S.No.	Component	Role / Function
1	User / Employee	Submits a Standard Laptop request through the ServiceNow catalog.
2	ServiceNow Catalog	Captures the Standard Laptop request and creates the Requested Item (RITM).
3	Flow Designer	Triggers the automation and processes the request information.
4	Catalog Task	Automatically creates the task required for laptop procurement/fulfillment.
5	IT / Procurement Team	Receives the task, performs fulfillment activities, and updates task status.
6	ServiceNow Tracking	Maintains request and task status for visibility and completion.

Architecture and Data Flow

Step	Process
1	Employee → ServiceNow Catalog: User submits a Standard Laptop order.
2	Catalog → RITM: ServiceNow records the requested item.
3	RITM → Flow Designer: The Standard Laptop flow is triggered.
4	Flow Designer → Catalog Task: The flow creates the required fulfillment task.
5	Catalog Task → IT/Procurement: Task is assigned to the appropriate team.
6	IT/Procurement → ServiceNow: Work is completed and status is updated.
7	ServiceNow → User/IT: Request progress and completion remain trackable.

Key Features

- Automated Standard Laptop request processing.
- Automatic Catalog Task creation and assignment.
- Centralized request and task tracking in ServiceNow.
- Flow can be configured through the Standard Laptop item's Process Engine.

• Architecture can be extended to other IT equipment and service catalog requests.

Architecture Flow Diagram (text representation)

Employee → ServiceNow Catalog → Requested Item (RITM) → Flow Designer → Catalog Task → IT / Procurement → Completed Request

Reference: The uploaded Solution Architecture template defines solution architecture as the process that connects business problems with technology solutions and describes solution structure, behavior, features, requirements, and delivery specifications.
