Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the implemented ServiceNow Flow Designer solution for standard laptop procurement. The solution demonstrates working automation, structured configuration, reusable flow actions, and alignment with the defined procurement requirements.

Instructions:

1. Configure the Catalog Item and variables for a standard laptop request.

2. Build the Flow Designer automation with a Service Catalog/RITM trigger, approval, decision logic, procurement task creation, notifications, and status updates.

3. Include the required ServiceNow configuration and setup steps needed to reproduce the solution.

4. Attach or link to the project repository if source/configuration documentation is maintained there.

Solution Summary

Field	Details
Repository Link / URL	ServiceNow Developer Instance (PDI) project configuration
Programming Language(s)	ServiceNow configuration, Flow Designer expressions, JavaScript where required
Framework(s) Used	ServiceNow Flow Designer, Service Catalog
Key Features Implemented	Standard Laptop Catalog Item; RITM trigger; manager approval; approval decision; SC Task creation; IT Procurement assignment; requester notifications; request status tracking
Pending / Incomplete Features	External procurement-system integration is not included in the current scope
Setup / Run Instructions	Create the Standard Laptop Request Catalog Item → configure variables → create IT Procurement group → create Flow Designer flow → configure approval → create SC Task → configure notifications → test approved and rejected paths in the PDI

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Flow and configuration are modular and organized	Yes
2	Meaningful names are used for catalog item, variables, flow, actions, and groups	Yes
3	Configuration includes descriptions/documentation where necessary	Yes
4	Error/exception paths are handled through approval rejection and task/status handling	Yes
5	The solution runs without critical errors in the ServiceNow PDI	Yes
6	Project configuration/documentation can be maintained in version control if exported where supported	Yes

Additional Notes / Comments:

The project is designed specifically for a ServiceNow Developer Instance. The main automation is implemented through Flow Designer rather than a separate external application.
