Project Executable Files

Date	29 September 2026
Team ID	SWTID-2026-3672
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	3 Marks

Project Executable Files

This section documents the executable and deployable configuration required to reproduce the ServiceNow laptop procurement automation. The solution is implemented in a ServiceNow Developer Instance, so the primary deliverables are ServiceNow configuration elements rather than a standalone executable binary.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	ServiceNow application / project configuration	Yes
2	Project setup and run guide	Yes
3	Catalog Item and variable configuration	Yes
4	Flow Designer flow configuration	Yes
5	Database schema / seed files	NA – uses ServiceNow platform tables
6	Deployed application URL	PDI instance URL to be provided by evaluator/team
7	APK / Executable binary	NA – ServiceNow web application
8	Dockerfile / Containerization config	NA – not required for PDI implementation
9	Test scenarios and test results	Yes
10	Demo video / walkthrough	To be provided if required

Step 2: ServiceNow Configuration Structure

ServiceNow Developer Instance
■
■■■ Service Catalog
■ ■■■ Standard Laptop Request
■ ■■■ Employee Name
■ ■■■ Department
■ ■■■ Laptop Model
■ ■■■ Laptop RAM
■ ■■■ Business Justification
■
■■■ Flow Designer
■ ■■■ Standard Laptop Procurement Automation
■ ■■■ RITM Trigger
■ ■■■ Approval
■ ■■■ Approved / Rejected Decision
■ ■■■ Create Procurement SC Task
■ ■■■ Send Notification
■ ■■■ Update Request Status
■
■■■ Supporting Configuration
■■■ IT Procurement Assignment Group
■■■ Approval Configuration
■■■ Notifications

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	ServiceNow Developer Instance (PDI) URL – to be entered by the team
Login Credentials (Demo)	Use authorized ServiceNow PDI credentials; do not place passwords in project documentation
Platform / Hosting Provider	ServiceNow Developer Instance (PDI)
Repository Link	Not required for core PDI configuration; add repository link if configuration documentation/export is maintained
Demo Video Link	To be provided if required

Step 4: Run Instructions

Pre-requisites:

• Active ServiceNow Developer Instance (PDI)

• Appropriate administrative access to create Service Catalog and Flow Designer configuration

• IT Procurement group available or created in the instance

• Test user and approver accounts for validation

Step 1: Open the ServiceNow Developer Instance and navigate to Service Catalog → Maintain Items.

Step 2: Create the Standard Laptop Request Catalog Item and configure the required variables.

Step 3: Create or verify the IT Procurement assignment group.

Step 4: Open Flow Designer and create the Standard Laptop Procurement Automation flow.

Step 5: Configure the RITM trigger, approval action, approved/rejected decision, SC Task creation, notifications, and status updates.

Step 6: Submit a Standard Laptop Request as a test user.

Step 7: Approve the request and verify that the procurement SC Task is created and assigned.

Step 8: Repeat with a rejected request and verify the rejection notification and status.

Step 9: Complete the procurement task and verify the request reaches its completion state.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	External procurement-system integration is not included	Current scope uses ServiceNow SC Tasks; external integration can be added later.
2	Performance metrics depend on the PDI environment	Use Flow Designer execution details and the project's performance-testing document for measurements.
3	PDI URL/session availability may vary	Use the active ServiceNow Developer Instance when demonstrating the project.
