Scalability & Future Plan

Date	29 September 2026
Team ID	SWTID-2026-3672
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the ServiceNow laptop procurement solution can be extended for larger user bases, higher request volumes, stronger security controls, and additional procurement capabilities.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address
1	Core workflow depends on ServiceNow PDI configuration and availability.	Can affect live demonstration or testing availability.	Medium
2	Current solution focuses on standard laptop procurement within ServiceNow.	External supplier/procurement integration is not included.	Medium
3	Advanced asset/inventory synchronization is outside the current scope.	Manual or separate asset processes may be required after procurement.	Low

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Service Catalog requests are processed through ServiceNow Flow Designer.	Use scalable ServiceNow workflows, assignment groups, and controlled approval routing for higher request volumes.
2	Data Storage	Requests, RITMs, approvals, and tasks are stored in ServiceNow tables.	Use platform reporting, data retention policies, and structured catalog variables as the dataset grows.
3	Performance	Workflow execution is handled by the ServiceNow platform.	Monitor flow execution times and simplify unnecessary actions; test under larger request volumes.
4	Security	Access is controlled by ServiceNow roles and platform permissions.	Add stricter role/ACL controls, approval policies, audit tracking, and least-privilege access.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Inventory / Asset Integration	Short Term	Connect approved procurement with asset records and laptop inventory.
Phase 2	Supplier Integration	Medium Term	Integrate with an approved supplier or procurement system for order status updates.
Phase 3	Advanced Approval Rules	Medium Term	Introduce department, cost, model, and role-based approval routing.
Phase 4	Analytics & Optimization	Long Term	Add dashboards for procurement volume, approval time, completion time, and bottlenecks.
